# 1 Introduction

Duralie Coal Pty Limited (DCPL), a wholly owned subsidiary of Yancoal Australia Limited (Yancoal), has commissioned SLR Consulting Australia Pty Ltd (SLR) to conduct quarterly noise monitoring for the Duralie Coal Mine (DCM) operations guided by the requirements of the *Duralie Coal Mine Noise Management Plan (NMP)*, Document No. NMP-R06-A, dated May 2018. This report presents the results and findings from operator-attended operational noise monitoring conducted Thursday 13 August 2020. DCM has ceased mining operations and is currently undergoing rehabilitation works. Rehabilitation works are conducted during the daytime period only, as defined in the NSW *Industrial Noise Policy (INP)* (EPA 2000), and as such operator-attended monitoring was only conducted during the day-time period.

The objectives of the noise monitoring programme for this operating period were as follows:

- Conduct one round of external operator-attended noise measurements during operational periods at four nominated locations listed in Project Approval, representative of receivers located in the north, west and south directions from the DCM. The monitoring locations are NM1, NM4, NM5, and NM6.
- The three rounds comprise a single round within each of the day, evening and night-time periods as defined in the NSW *Industrial Noise Policy* (EPA 2000).
- Quantify all sources of noise within each of the attended noise surveys, including measured and/or estimated contribution and maximum level of individual noise sources.
- Assess the noise emissions from the DCM and determine compliance with respect to the limits contained in the NMP.

This report uses specialist acoustic terminology. An explanation of common terms is provided in **Appendix A**.

## 2 DCM Noise Limits

### 2.1 EPL Noise Limits

The site specific noise limits of sub-section L4.1 of Section L4 *Noise Limits* of the EPA's Environment Protection Licence (EPL), EPL 11701 dated 8 November 2017, for the five nominated attended noise monitoring locations, are summarised in **Table 1**.

**Table 1 EPL Noise Limits for the Nominated Attended Noise Monitoring Locations**

| Locality                   | LAeq(15minute) |         |            | LA1(1minute) |
|----------------------------|----------------|---------|------------|--------------|
|                            | Daytime        | Evening | Night-time | Night-time   |
| NM1 Woodley                | 35             | 35      | 35         | 45           |
| NM4 Fisher-Webster         | 35             | 35      | 37         | 45           |
| NM5 Moylan                 | 35             | 35      | 35         | 45           |
| NM6 - Oleksiuk and Carmody | 35             | 35      | 39         | 45           |

Additional conditions relating to the noise monitoring location and applicable meteorological conditions are outlined in sub-sections L4.2 (a) and L4.8 of EPL 11701 and are summarised below.

*L4.2 (a) with the  $L_{Aeq}$  (15-minute) noise limits in condition 4.1, the noise measurement equipment must be located:*

*Approximately on the property boundary, where any dwelling is situated 30 metres or less from the property boundary closest to the premises; or*

*Within 30 metres of a dwelling façade, but not closer than 3 m, where any dwelling on the property is situated more than 30 metres from the boundary closest to the premises.*

*Noise from the premises is to be measured at a distance within 30 metres of the locations identified in L4.1 to determine compliance with this condition.*

*L4.8 The noise limits set out in condition in L4.1 apply under all meteorological conditions except for the following:*

- a) wind speeds greater than 3 metres/second at 10 metres above ground level; or*
- b) Temperature Inversion conditions up to 3 degrees Celsius/100m and wind speeds greater than 2 metres/second at 10 metres above the ground level; or*
- c) Temperature inversion conditions greater than 3 degrees Celsius/100m.*

## 2.2 Project Approval Noise Limits

The Project approval conditions relating to the noise limits are as follows:

### Noise Criteria

2. Except for the land referred to in Table 1, the Proponent shall ensure that the noise generated by the project does not exceed the criteria in Table 2 at any residence on privately-owned land or on more than 25 percent of any privately-owned land.

Table 2: Noise criteria dB(A)

| Location                       | Day                         | Evening                     | Night                       |                           |
|--------------------------------|-----------------------------|-----------------------------|-----------------------------|---------------------------|
|                                | $L_{Aeq(15\text{ minute})}$ | $L_{Aeq(15\text{ minute})}$ | $L_{Aeq(15\text{ minute})}$ | $L_{A1(1\text{ minute})}$ |
| 172 - Lyall                    | 35                          | 39                          | 40                          | 45                        |
| 126 – Hamann Pixalu PL         | 35                          | 35                          | 39                          | 45                        |
| 123 – Oleksiuk & Carmody       |                             |                             |                             |                           |
| 173 – Trigg & Holland          | 35                          | 36                          | 37                          | 45                        |
| 116 - Weismantel               |                             |                             |                             |                           |
| 127 – Fisher-Webster           | 35                          | 35                          | 37                          | 45                        |
| 131(1) - Relton                |                             |                             |                             |                           |
| 180 (1) - Thompson             | 35                          | 36                          | 36                          | 45                        |
| 95 - Smith & Ransley           | 35                          | 35                          | 36                          | 45                        |
| 144 - Wielgosinski             |                             |                             |                             |                           |
| 169 - Williams                 | 35                          | 36                          | 35                          | 45                        |
| 177 - Thompson                 |                             |                             |                             |                           |
| All other privately-owned land | 35                          | 35                          | 35                          | 45                        |

Notes:

- Noise generated by the project is to be measured in accordance with the relevant procedures and exemptions (including certain meteorological conditions) of the NSW Industrial Noise Policy; and
- For this condition to apply, the exceedences of the criteria must be systemic.

## 2.3 Low Frequency Noise

The ‘Duralie Modification Noise and Blasting Assessment’ (prepared by SLR Consulting Australia dated 9 July 2014) included a low frequency analysis of C and A weighted intrusive noise levels in accordance with the NSW *Industrial Noise Policy* (INP) requirements. The assessment indicated that there is no dominant low-frequency content relating to noise emissions from the DCM.

At all locations DCM was either not audible or significantly below the relevant noise criteria and low frequency noise is therefore not addressed further in this report. The results of the operator attended noise measurements presented in **Section 3**.

## 3 Operational Noise Monitoring Methodology

### 3.1 General Requirements

All acoustic instrumentation employed throughout the monitoring programme has been designed to comply with the requirements of AS IEC 61672.1 – 2004 *Electroacoustics—Sound level meters – Specifications*, AS IEC 61672.2-2004, AS IEC 61672.3-2004 and carried current NATA or manufacturer calibration certificates. Instrument calibration was checked before and after each measurement survey, with the variation in calibrated levels not exceeding  $\pm 0.5$  dBA.

### 3.2 Methodology – Operator-attended Noise Monitoring Locations

Noise monitoring was conducted guided by the requirements of the NMP. Operator-attended noise measurements were conducted during the day period for a minimum of 15 minutes per period at each of the four nominated noise monitoring locations. The details of the operator-attended noise monitoring locations are contained within **Table 2** and shown in Error! Reference source not found.. During the operator attended noise measurements, the character and relative contribution of ambient noise sources along with the mine contributions were noted.

**Table 2 DCM Operational Noise Monitoring Locations**

| Monitoring Location | Receiver Type | Resident / Owner      | Monitoring Location - MGA Zone 56 |              |
|---------------------|---------------|-----------------------|-----------------------------------|--------------|
|                     |               |                       | Easting (m)                       | Northing (m) |
| NM1                 | Residence     | Woodley <sup>1</sup>  | 400644                            | 6421907      |

### ATTENDED NOISE MONITORING LOCATIONS

FIGURE 1

The objective of the DCM operational operator-attended noise monitoring was to measure the maximum ( $L_{Amax}$ ) and the  $L_{Aeq(15minute)}$  noise level contributions at the nearest potentially affected receptors to determine the noise contribution of mining activities associated with Duralie Coal Mine operations over a 15 minute measurement period. In addition, the operator quantifies and characterises the overall levels of ambient noise in the area (i.e.  $L_{Amax}$ ,  $LA1$ ,  $LA10$ ,  $LA90$ , and  $L_{Aeq}$ ) over the 15 minute measurement interval. Operator-attended noise measurements were conducted using a one-third octave integrating Brüel & Kjær Type 2250L sound level meter (s/n 3003389).

## 4 Results

### 4.1 Operator-attended Monitoring – DCM Operational Activity

Operator-attended noise measurements were conducted during the day period on Thursday 13 August 2020. Results of the operator-attended noise surveys at NM1, NM4, NM5, NM6 are provided in **Table 3**.

A summary of the results for the operator-attended noise monitoring are displayed graphically in **Appendix B**. Charts of the noise surveys show  $L_{Amax}$ ,  $L_{Aeq}$ , and  $L_{Aeq(\leq 1.25kHz)}$  in 1-second intervals throughout the monitoring survey.

Ambient noise levels presented include all noise sources such as transport (roads, rail and aircraft), fauna (insects, frogs, birds, and bats), farm animals, the natural environment (wind in trees), domestic noises, other industrial operations as well as Duralie Coal Mine noise emissions.

Weather data during the monitoring period has been obtained from the weather station located on the Duralie Coal Mine site. Where this data was not available meteorological conditions have been estimated based on observed conditions during the monitoring period.

The tables provide the following information:

- Date and start time, operator and equipment details.
- Monitoring location.
- Wind velocity (m/s) and temperature ( $^{\circ}C$ ) at the measurement location.
- Typical maximum ( $L_{Amax}$ ) and contributed  $L_{Aeq(15minute)}$  noise levels.

#### 4.1.1 Operator-attended Noise Survey Results

Results of the operator-attended noise surveys at all monitoring locations are provided in **Table 3**. Monitoring location NM1 represents residential receptors located to the south of the site. Due to access restrictions noise monitoring was conducted at the entrance to the property.

**Table 3 Daytime Operator Attended Noise Survey Results**

| Location | Date/Start Time/<br>Weather              | Primary Noise Descriptor dBA (15 minute) |                 |                  |                  |                  |                             | Description of Noise Emissions and Typical Maximum Noise Levels (dBA)   |

**NM1**

- DCM operations were inaudible during the operator-attended survey at this location.
- The ambient noise environment at the monitoring location generally consisted of road and rail traffic as well as natural sources such as birdsong.

**NM4**

- DCM operations were inaudible during the operator-attended survey at this location.
- The ambient noise environment at the monitoring location generally consisted of natural sources such as birdsong as well as road traffic noise and aeroplane noise.

**NM5**

- DCM operations were inaudible during the operator-attended survey at this location.
- The ambient noise environment at the monitoring location generally consisted of natural sources such as birdsong and wind related noise.

**NM6**

- DCM operations were inaudible during the operator-attended survey at this location.

- The ambient noise environment at the monitoring location generally consisted of road and rail traffic as well as natural sources such as birdsong.

## 5 Performance Assessment

Results of the operator-attended noise measurements compared with the relevant noise criteria contained in the Project Approval and EPL 11701 are given in **Table 4**.

**Table 4 Performance Assessment – Operations**

| Location | Estimated DCM LAeq(15minute) Contribution dBA | Noise Criteria LAeq(15minute) dBA | Compliance |
|----------|---|-----------------------------------|------------|
| NM1      | I/A <sup>1</sup>                              | 35                                | Yes        |
| NM4      | I/A   | 35                                | Yes        |
| NM5      | I/A   | 35                                | Yes        |
| NM6      | I/A   | 35                                | Yes        |

1. I/A = Inaudible

Results presented in **Table 4** indicate that compliance with the relevant criteria was achieved at all operator-attended monitoring locations.

## 6 Conclusion

SLR has conducted quarterly noise monitoring for the DCM guided by the requirements of the NMP.

Operator-attended operational noise monitoring was conducted at four locations on Thursday 13 August 2020. The assessment of daytime operational noise emissions found DCM to be compliant with the relevant criteria contained within the DCM PA and EPL.

# APPENDIX A

## Acoustic Terminology

The following is a brief description of the acoustic terminology.

| Acoustic Terminology | Description   |
|----------------------|---|
| 'A' Weighted         | Frequency filter applied to measured noise levels to represent how humans hear sounds.  |
| dBA                  | 'A' Weighted overall sound pressure level.  |
| L90 , L10, L1        | A statistical measurement giving the sound pressure level which is exceeded for the given percentile of an observation period, i.e., L90 is the level which is exceeded for 90 percent of an observation period. L90 is commonly referred to as the background sound level. |
| L <sub>Amax</sub>    | Highest value of the A-weighted sound pressure level with a specified time weighting that occurs during a given event.  |
